Stillwater Classes

APRIL

19 – 21 C Wastewater Oper

25 – 28 B Wastewater Lab

25 – 29 A Wastewater Lab

MAY

10 – 12 D W&WW Oper

23 – 26 C Wastewater Lab

JUNE

09 (am) Biological Processes

09 (pm) Activated Sludge

16 (am) Intermediate Math

16 (pm) Advanced Math

23 (am) QA / QC

23 (pm) Sampling

30 (am) Biological Processes

30 (pm) Activated Sludge

FREE Tuition for Certification Classes

Water and wastewater operators serve as public health professionals protecting our communities and environment by producing clean, safe water for drinking, recreation, and many other uses. As treatment processes become more complex and compliance monitoring more stringent, the importance of education and training is increasingly evident. This, along with an unwavering commitment to operator education, has resulted in Accurate Environmental Training Center's decision to offer FREE certification class retakes. If an operator attends any level of an Accurate certification training class and does not pass the associated DEQ exam, tuition will be waived for that operator to retake the class. System owners and operators will not only benefit from the cost savings, but they will have added confidence and peace of mind knowing that they are receiving a superior education from industry experts with over 100 years of combined professional experience.

Since 1998, Accurate Environmental Training Center has been providing the highest quality operator and laboratory training in the State. Accurate Training Center currently operates state-of-the-art classrooms in Stillwater and Tulsa. Operators and lab technicians that attend Accurate training classes can be certain that they are acquiring the skills and knowledge needed to achieve successful and rewarding careers in the water and wastewater industry. If you would like more information or to register for a class, contact Jeff Clarke at (800) 516-LABS or email jeff@accuratelabs.com.

Drinking Water Monitoring Assistance

The *Safe Drinking Water Information System* (SDWIS) is a website provided by the ODEQ that allows public water systems to monitor their drinking water analysis requirements. Using this valuable online tool, Accurate Environmental is able to help clients meet State and Federal drinking water requirements and avoid costly Notice of Violations. Whether monthly, quarterly, or annually, Accurate Environmental can help you track your system's SDWIS testing schedule and provide you with sampling containers in a timely manner, at no additional cost.

Obtaining accurate analysis results starts with your sampling program. Many errors in the overall process of obtaining water quality information occur during sampling. Because of this, a comprehensive list of sampling instructions is available on the Accurate Environmental website to download and/or print whenever you need them. Samples can then be shipped to the lab for analysis, dropped off in person, or picked up by Accurate Environmental's Field Service Technicians on their weekly routes throughout the state. If you need someone do the actual sampling for you, Accurate Field Services can provide that service, as well.

To learn more about Accurate Environmental's SDWIS monitoring assistance service, please call (800) 516-LABS or visit us online at www.accuratelabs.com.
