

# PFAS / PFOS

Even though PFAS/PFOS have been widely used in consumer and industrial products since the 1950s there's much we don't know about how the compounds negatively affect human health and the environment. Many studies have been done over the last few years in an effort to determine the health effects of exposure to PFAS/PFOS, but there is still very little definitive information at this point.

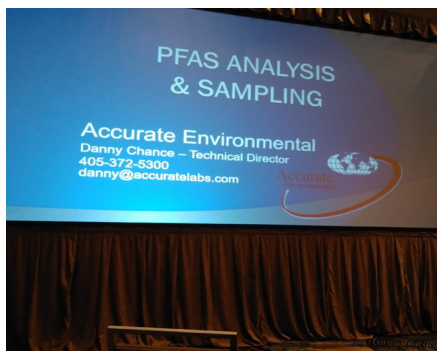

**Accurate Labs** has been analyzing PFAS/PFOS for over 10 years, and has had more experience dealing with it than most other laboratories or environmental companies. Due to their **extensive experience with PFAS/PFOS**, **Accurate Labs** has been asked to help get information to people through conferences, television interviews and radio interviews. We have attended multiple conferences in Oklahoma and surrounding states giving presentations about PFAS/PFOS, as well as a TV news interview, and a recent interview with National Public Radio (NPR).
