Don't Miss These Investment Opportunities!

Difficult economic times require difficult decisions regarding where and how our money is spent. Everyone from private citizens to the Federal Governments are faced with similar challenges. Most organizations' first reaction is to cut unnecessary expenses. Unfortunately, training is usually near the top of the list. Is that because it is an unnecessary expense, or is it because we are not looking closely enough at it to realize its long-term **investment benefits**?

A certain level of training is required by law. There is no way around that. But that's often where our perceived value of training ends. What we frequently fail to recognize are the long-term, less tangible benefits of quality training. At a time when budgets are tight and every penny counts, you need to have **confidence** in your organization's ability to operate **efficiently**, at every level, without sacrificing **quality**. The day-to-day decisions that operators make regarding the operation of treatment, distribution, and collection systems will have an exponentially **greater impact** on budgets than the cost of training itself. In fact, the **level and quality** of training will help determine the **effectiveness** of the operator's decision-making ability.

Accurate Environmental Training Center utilizes instructors with backgrounds in **operations, management, and science** to ensure that their students understand the **importance** of their roles in the overall system. Accurate Training provides the knowledge and skills necessary to build the operator's confidence and help secure their position as an asset to their organization. Investing in the **education and development** of your operators also shows them that they are an important part of the system and encourages personal and professional **growth**. If you still doubt the benefits of quality training, then ask yourself the following questions: "*What if I train my employees and they leave the company? What if you don't train them and they stay?*"

For more information or to register for classes contact **Jeff Clarke** at (800) 516-5227 or email jeff@accuratelabs.com

Do You Want to Meet All Your Environmental Regulations?

Accurate Environmental Can Help.

As an operator, you know how hard it is to keep up with a continuously changing industry like water and wastewater treatment. As regulations change and treatment strategies evolve, operators are confronted with the complicated task of keeping up with these **rapid changes** without interrupting their current **operational duties**, all while still meeting current State and Federal requirements. Many of Oklahoma's water and wastewater systems do not have the manpower and resources to accommodate both equally. **Accurate Environmental** understands your situation and has developed the **perfect, affordable solution**.

Accurate Environmental Services offers technical assistance through a monthly retainer program called **Environmental Insurance**. Accurate's Environmental Insurance allows you to retain **technical assistance** from our staff of engineers, and operations and laboratory experts to help you evaluate and monitor your treatment system so you can be **confident** that it is being operated as **efficiently** as possible and meeting all ODEQ and EPA requirements. The cost and scope of services provided are based on **your needs** and the size of your system. Few, if any, other environmental companies in the nation have the **engineering, operational, and scientific expertise** combined into one company able to provide comprehensive technical services at a **fraction of the cost** of individual service providers. **Environmental Insurance** can easily pay for itself due to the resulting operational **cost savings** and the elimination of compliance violation fines. Contact **Accurate Environmental** today so you can rest easy knowing that you have the **full support** of one of the nation's leading environmental services providers.
